# IRONBENCH

## Cloud Config

A secure foundation for  
cloud operations.

## Common Challenges with Cloud Adoption

-  Lack of skills and experience with cloud solutions.
-  Unfamiliar with how to implement safe, secure, standards-based cloud solutions, and struggle with PCI, SOX, and HIPAA compliance.
-  Need to leverage cloud solutions for continuous test, inspection, and delivery of infrastructure and applications.
-  Adoption of cloud solutions takes longer and costs more than originally anticipated.

IronBench Cloud Config is the fastest way to implement AWS best-practices and information security for the enterprise.

## Why Cloud Config?

Cloud Config significantly reduces your cloud adoption timeline. Why spend months trying to get it right when you can implement a solid, secure, managed, enterprise platform in **less than a day**? Cloud Config reduces friction while implementing information security best-practices consistently across your operations.

### Identity & Access Management

Secure access control using your existing directory service or an AWS service — you choose the option that works best for you.

### Logging & Analytics

Secure, flexible approach to logging and analytics using the best tools available.

### Network Security

Secure network management that adapts to the way you conduct operations.

### Application Hosting

Enterprise application management with all the services you need to host everything your organization has to offer.
